

ALLOY STEEL TECHNOLOGIES, INC.

Performance Crusher Hammers

Long Service Life Hammers

Astech, a specialized alloy steel foundry, has been manufacturing high performance components for the Power Industry since 1987. These parts are more cost effective and alloyed to last longer than the Original Equipment Manufacturer. Each heat is analyzed spectrographically before it is poured - assuring consistent, high quality castings.

Included in Astech's line of Power Industry performance products are long life crusher hammers. Astech's hammers are cast from a variety of high strength, steel alloys to meet your specific needs. This provides toughness and a significant increase in hammer service life. Astech will be happy to provide overlay in the high wear areas to provide additional durability. Astech offers a wide selection of hard surfacing alloys for specific applications.

Beyond performance replacement parts and equipment, Astech, specializes in modifying designs and manufacturing custom parts to meet your specifications and operating conditions. Astech's engineering department will work with you to develop innovative solutions to your wear and/or operational problems.

Please contact your Astech representative or our office for further details. We welcome the opportunity to provide a comprehensive proposal to meet all of your specific needs.
